Historical building = problematic refurbishment Large industrial equipment features

Extraordinary field example with

Exceptional Challenges in many respects

Historical building = problematic refurbishment
Large industrial equipment features
Natural refrigerants in rural area

# Extraordinary field example with Exceptional Challenges in many respects

Historical building = problematic refurbishment
Large industrial equipment features
Natural refrigerants in rural area
Alternative financing model

# Extraordinary field example with Exceptional Challenges in many respects

Historical building = problematic refurbishment
Large industrial equipment features
Natural refrigerants in rural area
Alternative financing model
Primary energy factor

# Heating and hot water demand Hotel & local primary school

# **Industrial ammonia 2 stage heat pump system**

# Lake water shell & tube heat exchangers

# **Machine room location**

# **Machine room controled environment**

#### **Energy flow diagram**

# Heat pump as hydro electricity bonus multiplier

# Heat pump as hydro electricity bonus multiplier

#### **Environment**

Renewable thermal source : lake water

- Renewable thermal source : lake water
- Saves 400.000 liter of fosil fuel per year

- Renewable thermal source : lake water
- Saves 400.000 liter of fosil fuel per year
- CO2 reduction 1200T/y

- Renewable thermal source : lake water
- Saves 400.000 liter of fosil fuel per year
- CO2 reduction 1200T/y
- Natural refrigerant Ammonia : GWP & ODP = 0

- Renewable thermal source : lake water
- Saves 400.000 liter of fosil fuel per year
- CO2 reduction 1200T/y
- Natural refrigerant Ammonia : GWP & ODP = 0
- Recovery lake natural temperature level

#### **Environment**

- Renewable thermal source : lake water
- Saves 400.000 liter of fosil fuel per year
- CO2 reduction 1200T/y
- Natural refrigerant Ammonia : GWP & ODP = 0
- Recovery lake natural temperature level

#### Financial:

Yearly saving: 232.000CHF on energy bill

#### **Environment**

- Renewable thermal source : lake water
- Saves 400.000 liter of fosil fuel per year
- CO2 reduction 1200T/y
- Natural refrigerant Ammonia : GWP & ODP = 0
- Recovery lake natural temperature level

#### Financial:

26

- Yearly saving: 232.000CHF on energy bill
- ROI : < 2 years</li>

#### **Environment**

- Renewable thermal source : lake water
- Saves 400.000 liter of fosil fuel per year
- CO2 reduction 1200T/y
- Natural refrigerant Ammonia : GWP & ODP = 0
- Recovery lake natural temperature level

#### Financial :

- Yearly saving: 232.000CHF on energy bill
- ROI : < 2 years</li>
- Investment : life cycle : +25 years

#### **Challenges overcome:**

Refurbishment example

> non conventional approach

- Large industrial equipment
- Natural refrigerants in rural area
- Alternative financing model
- Extreme low primary energy factor

#### <u>Challenges overcome:</u>

- Refurbishment example
- Large industrial equipment
- Natural refrigerants in rural area
- Alternative financing model
- Extreme low primary energy factor

- > non conventional approach
- > larger applications spectrum

#### Challenges overcome:

- Refurbishment example
- Large industrial equipment
- Natural refrigerants in rural area
- Alternative financing model
- Extreme low primary energy factor

- > non conventional approach
- > larger applications spectrum
- > possible

#### Challenges overcome:

- Refurbishment example
- Large industrial equipment
- Natural refrigerants in rural area
- Alternative financing model
- Extreme low primary energy factor

- > non conventional approach
- > larger applications spectrum
- > possible
- > ownership & exploitation to utility sector

#### <u>Challenges overcome:</u>

- Refurbishment example
- Large industrial equipment
- Natural refrigerants in rural area
- Alternative financing model
- Extreme low primary energy factor

- > non conventional approach
- > larger applications spectrum
- > possible
- > ownership & exploitation to utility sector
- > fossil fuel phase out
