

TABLE OF CONTENTS

PREFACE.....	10
1 THEORETICAL FOUNDATIONS.....	13
1.1 Objectives and background	13
1.2 Definitions; challenges faced in the Mediterranean climate	14
1.3 Calculation Methods and Tools.....	16
1.4 Designing a HVAC SYSTEM for A Med-NZEB building.....	19
1.4.1 Conceptual Design	20
1.4.2 Preliminary Design	20
1.4.3 Detailed Design.....	21
1.5 Key Issues for a Residential Building Conceptual Design.....	21
Small Internal Heat Gains.	22
Varied Use of Spaces.	22
Small Number of Zones.	22
• Greatly Variable Distribution Losses.	22
Partial Loads.	22
Dehumidification Issues.....	22
Detached Single-Family House.	23
Multi-storey Single-Family House.....	23
Multi-family Houses.	23
1.6 Key Issues in Estimating Heating and Cooling Loads for Residential Buildings	23
Sensible Heating and Cooling Load through Fenestration.	24
Sensible Heating and Cooling Load Through Opaque Parts of the Building’s Outer Skin.	24
Ventilation Heating and Cooling Load.	25
Dehumidification Load for Hot, Humid Climates.	26
Internal Heating and Cooling Loads.	26

Cooling Load Time-Dependency, and Space Diversity.....	26
1.7 Key Issues in Designing Cooling Systems.....	27
Equipment Selection and Oversizing.....	27
Condensed Water Drainage.....	28
Thermostat Set Point.....	28
Humidity Control.....	28
Hybrid Heating and Cooling Systems.....	28
1.8 Key Issue in Designing Ventilation Systems.....	29
1.9 Key Issue in RES integration.....	29
2 EFFECTS OF CLIMATE ON SYSTEM SELECTION.....	31
2.1 introduction.....	31
2.1.1 System selection methodology.....	31
2.1.2 Selection Criteria.....	32
2.1.3 Recommendations in a nutshell.....	32
2.2 Efficiency ratios.....	34
2.3 Classification of Air Conditioning Systems.....	35
2.2.1 Combined Systems (Sustainable cooling).....	37
2.4 Importance of Climate in System Selection.....	37
2.5. Case Studies on Climate and System Selection.....	38
2.5.1 Case Study 1.....	38
2.5.2 Case Study 2.....	40
2.5.3 Case Study 3.....	41
2.5.4 Case Study 4.....	45
2.6 Conclusions.....	46
3. RESIDENTIAL VENTILATION.....	47
3.1 Introduction.....	47
3.2 Residential Ventilation Standards.....	47
3.2.1 Country Standards.....	47
3.3. Design Criteria.....	48

3.3.1 Airflow Rates	48
3.3.2 Load Calculation Models	49
3.4 Residential Ventilation Methods	53
3.4.1 Natural Ventilation.....	53
3.4.2 Mechanical Ventilation	54
Single-Fan System	54
Double-Fan System.....	55
3.4.3 Heat-Recovery Ventilation Unit	55
3.4.4 Decentralized System.....	57
3.4.5 Mechanical Ventilation Control Systems.....	58
Constant-Speed Ventilation System.....	59
Demand-Controlled (DC) Ventilation Systems	59
Single Space-point Mixing Chamber DC	59
Multiple Space-points DC.....	60
3.4.6 Eco-design Requirements for Ventilation Units	60
4. ACTIVE EVAPORATIVE COOLING EQUIPMENT	62
4.1 Standards	62
4.2 Introduction	62
4.3 Direct Evaporative Cooling.....	63
4.3 Indirect Evaporative Cooling	66
4.5 Combined Evaporative Cooling	67
4.6 Dew point evaporative cooling systems	68
4.7 System Design.....	70
4.7.1 Installation.....	70
4.8 Maintenance	71
4.9 Economic feasibility.....	71
4.10 Evaporative Pre-Coolers.....	72
5. HIGH PERFORMANCE HVAC SYSTEM SOLUTIONS AND TECHNOLOGIES	74

5.1 Heat Pump Technologies.....	74
5.1.1 Air-to-Air Systems.....	77
5.1.2 Air-to-Water Systems	77
5.1.3 Water-to-Air Heat Pumps for Cooling.....	78
5.1.4 Water-to-Water Systems (Ground Source Heat Pumps).....	79
5.1.4.1 Water-to-Water Heat Pump Installation.....	80
5.2 Variable Refrigerant Flow (VRF) Systems	81
5.2.1 Conventional Two-Pipe VRF Systems	82
5.2.2 Heat-Recovery VRF outdoor unit technology; Three-Pipe VRF Systems	82
5.2.3 Inverter Technology and Variable-Speed-Drive Compressors	84
5.2.4 Variable Refrigerant Temperature (VRT).....	84
5.3 Additional Futures of Heat Pump Technologies	86
5.3.1 Continuous Heating Operation.....	86
5.3.2 Hot Water Solutions.....	86
5.3.2.1 Heat-pump electric water heater	86
5.3.3 PV-powered heat pumps	87
5.3.4 Movement sensors.....	87
5.3.5 Infrared ground temperature sensor	87
5.4 HVAC System Recommendations	87
5.5 Heat Pump Selection and Performance Calculations: a Case Study	88
5.5.1 Heating capacity.....	90
5.5.2 Cooling capacity	91
5.5.3 Operation period	92
5.5.4 Heating energy cost.....	94
5.6 Hydronic Heating and Cooling Systems	95
5.6.1 Radiative heating systems (high-efficiency hot water systems)	95
5.6.2 Radiative cooling systems (high-efficiency chilled water systems)	96
5.7 Energy Recovery Systems.....	96
5.8 District Cooling/Heating Systems	97
5.9 Co-generation	97

6 RENEWABLE ENERGY SOLUTIONS AND INTEGRATION	99
6.1 Introduction	99
6.2. Solar Thermal Energy	99
6.2.1 Components of Solar Thermal Installations.....	100
Thermal solar collectors.....	100
Solar tanks.....	102
Hydraulic circuit designs	102
6.2.2. Energy Produced by Solar Thermal Installations.....	103
Energy Demand for DHW	103
Example:	104
Climatic Conditions	105
Solar thermal installation data:	105
Calculations:	105
Results.....	105
6.2.3 Operating Schemes	106
Electrical resistance + Solar Thermal Energy.....	106
Gas boiler + Solar Thermal Energy	107
Heat pump + Solar thermal energy	107
6.3. Photovoltaic Solar Energy.....	107
6.3.1 Operation of Photovoltaic Installations.....	109
6.3.2 Energy Produced by Photovoltaic Installations	110
6.3.3 Self-Consumption: Energy Consumed vs Produced.....	110
6.3.4 Photovoltaic Installations Connected to The Grid	111
6.2.5. Photovoltaic Installations with Batteries.....	113
6.3.6 Photovoltaic Installations Connected to Thermal Equipment.....	113
6.3.7 Thermal Photovoltaic systems (PVT)	115
6.3.8 Concentrator Photovoltaic (CPV)	115
6.4. Biomass Energy.....	116
6.4.1 Dimensioning of The Biomass Installation.....	116
6.3.2 Practical Case.....	117
Boiler selection	117

Volume of the deposit of inertia	117
Biomass storage volume	117
Required space for the boiler and for the rest of the elements to be installed.....	118
6.4.3 Operating Schemes	118
6.4 Case Studies	119
6.4.1 Case Study 1	119
6.4.2 Case Study 2	120
6.5 Integrating Renewable Energy Sources.....	120
7 COST EFFECTIVENESS, OPTIMALITY, BENEFIT AND CO-BENEFIT	122
7.1 From cost-optimal analysis to new economic evaluation tools	122
7.2 Cost–benefit analysis.....	122
7.3 Multiple benefits and co-benefits related to energy efficiency measures in residential building.....	126
Reduced GHG emissions	127
Increased real estate value.....	128
Improved of indoor environmental quality and health conditions	128
Improved energy security.....	129
Subsidies and incentives	129
Macroeconomic benefits	129
8 GENERAL CONCLUSIONS	131
8.1 Conclusions	131
REFERENCES	133
