

Table of Contents

Preface	v
List of abbreviations	viii
1. INTRODUCTION.....	1
2. DEEP RENOVATION OF EXISTING BUILDINGS – A HOLISTIC APPROACH....	4
2.1. Moving towards net positive energy buildings	4
2.2. Principles of near-zero energy buildings and definitions in Europe	5
2.3. European buildings	10
2.4. Building renovations	18
2.5. Main renovation approach for existing buildings	21
2.6. Renovation of existing buildings vs Indoor Environmental Quality.....	25
3. ENERGY CONSUMPTION IN BUILDINGS	28
3.1. Operational energy use.....	28
3.2. Embodied energy use	30
4. CHARACTERISTICS OF GENERAL FIELD STUDY METHODOLOGIES	32
4.1. Main methodology for evaluating energy savings from renovation	32
4.2. Methodology for evaluating energy savings from heating/cooling system renovation	34
4.3. Methodology for evaluating energy savings from DHW system renovation ...	36
4.4. Methodology for evaluating energy savings from ventilation system renovation	37
4.5. Energy use calculation via the CEN Standard versus calculation via hourly simulation programmes.....	37
5. BUILDING ENVELOPE.....	39
5.1. Thermal insulation	40
5.1.1. Placement.....	40
5.1.2. State-of-the-art insulating materials.....	41
5.1.3. Waste-based materials.....	42
5.2. Replacement of windows/doors	42
5.3. The role of shading	43
5.4. Improvement of airtightness	43
5.4.1. The role of ventilation.....	43
5.5. Energy savings following envelope renovations and system rebalancing	43

6. VENTILATION SYSTEMS AND HEAT RECOVERY	47
6.1. Centralised Mechanical Supply and Exhaust Ventilation (balanced ventilation) with Heat Recovery (HRV).....	47
6.2. Mechanical Exhaust Ventilation with Exhaust Air Heat Pump	50
6.3. Decentralised heat recovery ventilation solutions.....	52
7. HEATING/COOLING SOURCES AND MAIN CONTROL SYSTEMS	54
7.1. Lowering / increasing the supply temperature in a heating/cooling system ..	56
7.2. Central forecast control of heat source.....	60
8. HEATING SYSTEMS	63
8.1. Local control of the heating system	66
8.2. Hydraulic balancing of extensive heating systems	69
9. DOMESTIC HOT WATER SYSTEMS	72
9.1. Energy demand for generating DHW	74
9.2. Circulation heat losses	75
9.3. Use of temperature control valves	76
9.4. Decrease in DHW temperature	78
10. SPACE COOLING SYSTEMS.....	79
10.1. Typical installations in European buildings.....	82
10.2. Energy Efficient Space Cooling in renovation.....	84
11. EDUCATING BUILDING OCCUPANTS.....	90
11.1. Occupant behaviour-centric building design and operation.....	91
11.2. Energy savings via user education	92
11.3. Energy savings via energy use evaluation	93
