

SCHOOL BUILDINGS

In many European countries ventilation of school buildings is a challenge. In times of COVID-19 the importance of a good indoor air quality is once more emphasized.

TRANSMISSION ROUTES

#1 via **microdroplets** staying **airborne** for hours and can be **transported** long distances

#2 via **droplets** (when sneezing, coughing or talking)

#3 via **surface contact** (hand-hand, hand-surface etc.)

#4 via the faecal-oral route.

VENTILATION

Secure ventilation of spaces **with outdoor air**

Switch air handling units with central recirculation to 100% outdoor air

Ensure CO₂-controlled ventilation runs **at maximum capacity** during occupancy

Switch on **ventilation** at least **2 hours before & after** occupancy

Install a **CO₂ monitor** with traffic light indication

Instruct teachers & staff on proper use of ventilation facilities

Open windows as much as possible during school hours & ensure airing during breaks

Keep toilet ventilation **24/7** in operation and/or keep **windows open**

SANITARY FACILITIES

Instructions to **flush** toilets with **closed lid**

Install water taps with sensor for no touch use

All water taps must be in **operating condition** with facilities to disinfect hands

Flush all toilets, water taps and showers **frequently**

Ensure that **floor drains do not run dry** to avoid open connection to the sewer
